

GASOLINE FIRE SAFETY

- Store gasoline in a container specifically designed for gasoline; in a well ventilated shed or garage. Don't store hazardous liquids near any source of heat, sparks or flame. This includes electric motors, which can spark when they switch on or off.
- Fill gasoline containers on the ground only.
- Fill your container 95% to allow for expansion. Make sure that the container's cap and vent cap are securely in place.
- Never transport gasoline in the passenger compartment of a vehicle, only in a car trunk or truck bed.
- Use gasoline only as a fuel for motors. Never as a solvent or degreaser.
- Always fill gas-powered equipment outside.
- Allow equipment to cool before re-fueling and before storing.
- Never smoke when you work with flammable or combustible liquids.
- Never bring gasoline indoors, even in small quantities.
- Store oily and solvent wet rags in a tightly sealed metal container or hang them outside to dry and then discard them.
- If you spill a flammable liquid on your clothing, place it outside to dry before laundering.
- Keep oil based paints and flammable and combustible solvents in their original containers and tightly capped, never in breakable glass containers.
- Flammable and combustible liquids include gasoline, kerosene, lacquers, paint thinner, some cleaning fluids, hair spray and paint solvents. Almost all aerosol products use a flammable gas to propel the contents from the container.
